STRATEGY DESCRIPTION

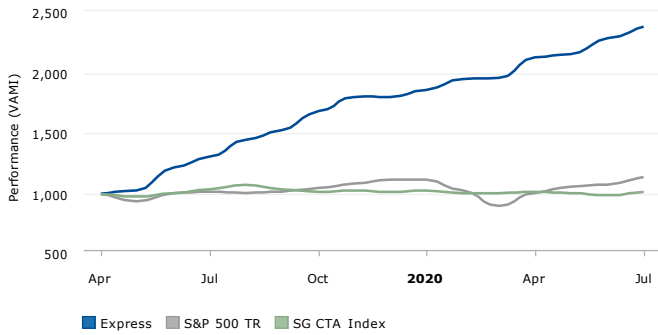

The **Express** strategy is based on a breakout logic and operates through a fully automated system specifically developed by our Investment Team. The trading systems is constituted of 4 different trading strategies based on EURUSD and GOLDonly, alllooking at breakoutlevels on differenttimeframesand identifying points where volumes are concentrated in order to create entry levels.

The strategy, even though is fully automatized, it is constantly and actively monitored by our investment team, who intervenes in cases of unexpected events on the market or to deactivate the trading system in occasions of expected increase in risk on the market (NFP, central banks decisions, etc.)

Strict Risk Management rules are enforced in order to keep the investment safe and to preserve clients' capital. The investment team also provides a hard stop, whichguaranteestheinvestorto losenotmorethana pre-fixedpercentage of the initial investment. This is ensured by tech solutions utilized by our team which allow client's trading positions to be automatically closed, as soon as the pre-agreed equity level is reached.

This is our higher risk investment strategy, that caters to the needs of investors with higher risk appetite, and who are seeking high yield levels on their invested capital. In order for us to ensure that their requirements are met, we have applied a strict risk management with a hard stop, plus an active risk management on our end.

PERFORMANCE (VAMI)
